

Upload And Delete Image

```
private readonly IWebHostEnvironment webHostEnvironment;

public UserRepository(IWebHostEnvironment webHostEnvironment)
{
    this.webHostEnvironment = webHostEnvironment;
}

public string UploadedFile(IFormFile ImageFile, string folderName)
{
    string uniqueFileName = null;

    if (ImageFile != null)
    {
        string uploadsFolder =
Path.Combine(webHostEnvironment.WebRootPath, "Images/" + folderName);
        uniqueFileName = Guid.NewGuid().ToString() + "_" +
ImageFile.FileName;
        string filePath = Path.Combine(uploadsFolder, uniqueFileName);
        ImageFile.CopyTo(new FileStream(filePath, FileMode.Create));
    }
    //upload image and return image name which must be stored in DB
    return uniqueFileName;
}

public void DeleteImage(string path)
{
    string fullPath = Path.Combine(webHostEnvironment.WebRootPath, path);
    if (System.IO.File.Exists(fullPath))
    {
        System.IO.File.Delete(fullPath);
    }
}
```
